

NEW POWER NEBRASKA

New Power Nebraska, an initiative of the American Clean Power Association, is a statewide coalition of renewable energy supporters advocating for policies and initiatives that enhance Nebraska's investment in wind energy, solar energy, and energy storage.

By educating, raising awareness, and participating in conversations with our state's leaders, New Power Nebraska will help make the case for clean energy investment to revive and drive our local economies.

Wind and solar energy benefits Nebraskans and can help power its dynamic manufacturing and agribusiness economy. Renewables bring new jobs to rural areas, generate new income opportunities for farmers, and add significant new tax revenue for schools and local governments.

We invite you to join our effort to support the growth of Nebraska's renewable energy industry and the economic benefits that will follow.
